

InfoLogix, Inc. Chosen by Major Home Hardware Manufacturer to Develop Mobile Software Solution to Optimize Workforce Efficiency

InfoLogix Continues to Expand Breadth as ‘Single Source’ Provider of Solutions that Enable the Mobile Enterprise

HATBORO, PA – July 31, 2007 – InfoLogix, Inc. (OTCBB: IFLG), a leading technology provider of mobile enterprise solutions for the commercial and healthcare industries, announced that it has been chosen by a major home hardware manufacturer to streamline the efficiency of its mobile workforce with a custom application using InfoLogix’s rapid-development mobility software.

With eight manufacturing facilities across North America and a fleet of nearly 300 trucks making daily deliveries, this manufacturer needed to quickly transform a time-consuming delivery process into a fast and efficient transaction. By signing for a custom application developed through the InfoLogix Intuitive Mobile Software platform, the customer expects its fleet to start benefiting from the new application approximately five weeks from the project start date, as opposed to the more common 3-4 months it would take through other channels or providers.

“Companies are quickly discovering that the complex task of implementing an enterprise mobile solution can be made significantly easier, faster, and more cost-efficient by turning to InfoLogix,” says Steven Salvitti, Vice President of Enterprise Mobility Solutions at InfoLogix. “As a single-source provider of solutions for the mobile enterprise, our experts understand the unique needs of companies that operate ‘outside the four walls,’ and we’re able to rapidly develop custom software applications that empower them to achieve optimal workflow.”

In developing the new application, InfoLogix is working to simplify the delivery process for the truck drivers, and enable business intelligence from each delivery to be used to optimize workflow within the enterprise. For example, the application will enable a driver to scan and capture all shipment information and immediately enter product condition reports. If a defective product arrives onsite, a request can be put through to dispatch service immediately or to have a replacement ready for dispatch at the warehouse. With optimized data transmission, once the product is signed for, the customer will be empowered with the data necessary to invoice immediately, thereby optimizing their cash flow and expediting return on investment.

InfoLogix’s Intuitive Mobile Software enables the rapid development of mobile handheld applications with highly customized workflows for field sales, field service, vehicle tracking, proof of delivery and more. New applications can “go live” in as little as one month, enabling companies to achieve “outside the four walls” computing capabilities with rapid deployment and faster return on investment.

About InfoLogix, Inc.

InfoLogix is a leading technology provider of wireless and RFID based intelligence solutions that enable the mobile enterprise. InfoLogix uses the industry's most advanced technologies to increase the efficiency, accuracy, and transparency of complex business and clinical processes for the healthcare industry and the commercial marketplace.
